Salman Rizqi Fatih

Full-Stack Engineer

Jakarta, Indonesia | salmanrf2@gmail.com | +62 897 9253 935 | GitHub | LinkedIn

SUMMARY

Full-stack engineer with 5 years of production experience building and owning systems from architecture through production. Experienced across frontend, backend, databases, infrastructure, authentication, payments, and production operations. Proficient in TypeScript, React, Next.js, Go, Node.js, AWS, and PostgreSQL. Experienced working independently and collaborating in remote, cross-cultural teams across Singapore, China, Ukraine, Poland, and Kazakhstan.

SKILLS

Languages: TypeScript, Go, Python, C.
Front-End: React, Next.js, TanStack Router, TanStack Query, Tailwind.
Back-End: Node.js, NestJS, REST, GraphQL, tRPC, Event-Driven Architecture, Microservices.
Data Storage: PostgreSQL, MongoDB, Redis, Elasticsearch.
Cloud & Infrastructure: GCP, AWS (Lambda, SQS, S3, IAM, VPC, CloudWatch, EC2, ECS), On-premise architecture.
Platform: Supabase, Vercel.
Deployment: Docker, GitHub Actions CI/CD.
Web Security: OAuth2.0, Auth0 (RBAC Permissions, Multi Audiences (Client facing, M2M)), Supabase Auth.
Payment: Xendit, Midtrans, Stripe (checkout flow, webhooks, vouchers, add-ons).

PROFESSIONAL EXPERIENCE

Full-Stack Engineer | GigRadar.io | January 2025 - Present

GigRadar is an automation platform trusted by ~2,000 top-rated Upwork agencies. Core contributor and architect of the GigRadar CRM, a paid add-on product powered by a distributed fleet of on-premise web crawlers.

- Oversee the full software development lifecycle of the GigRadar CRM: architecture, front-end, back-end, and production releases.
- Developed the CRM UI in React, TypeScript, and Tailwind, with multiple concurrent WebSocket connections for real-time chat and event streams.
- Developed the CRM admin dashboard for the internal team to monitor automation jobs with real-time logging, using React, TypeScript, and TanStack (Router, Query).
- Built the Stripe checkout flow end to end: on successful payment, a webhook activates the customer's account and automatically provisions a dedicated deployment for them on our on-premise fleet (cell-based architecture).
- Implemented authentication and authorization across the platform's services with Auth0: separate customer-facing and machine-to-machine audiences, each with its own roles and permissions.
- Replaced the third-party automation platform (Apify) with an in-house on-premise solution, cutting costs by roughly $3,000 per month.
- Built on-premise infrastructure for the automation back-end platform, maintaining 98.54% service uptime.
- Engineered the orchestrator service managing 100+ on-premise crawler machines for the automation platform.
- Developed the crawler application backing the CRM product, running on on-premise infrastructure and averaging ~400 chat rooms per instance.
- Designed the deployment pipeline for the on-premise server architecture using GitHub self-hosted runners.
- Monitor and troubleshoot production systems, resolving outages and performance degradations down to the OS and network level.
- Onboarded new engineers and QA engineers.

Tech Stack: TypeScript, React, Node.js, AWS (CloudFormation, SQS, S3, Lambda), NestJS, MongoDB, Redis, Tailwind.

Full-Stack Engineer | Gradient Innovation | April 2023 - December 2024

Software house specializing in AI applications.

Project: Red Offshore Proposals

An LLM-powered application that generates sales proposals for ship spare-part offerings.

- Built the proposal editor front-end in Next.js: document editing UI, version history views, and change-tracking diffs.
- Designed and built the AI pipeline that converts unstructured documents (PDF, DOCX) into structured data the system can compute on.
- Built AI-assisted proposal generation that automatically pulls relevant details from the processed source documents into the draft.

Tech Stack: Next.js, TypeScript, NestJS, Tailwind, MongoDB, LangChain, OpenAI API.

Project: AI Wingman (Internal Project)

Experimental dating platform where users converse with an AI to surface their preferences and get matched with potential partners.

- Designed and built the back-end AI chat system with Retrieval-Augmented Generation (RAG): past conversations are summarized and stored so the AI remembers user preferences across sessions and improves match recommendations.
- Implemented the front-end chat UI for AI-to-user and user-to-user communication.

Tech Stack: React Native, TypeScript, Python, FastAPI, LangGraph, MongoDB, Tailwind, LangChain, OpenAI API.

Full-Stack Developer | Ozip Teknologi Nusantara | September 2021 - January 2023

Project: Gayalo ERP and Mobile App (Indonesian fashion brand)

- Refactored a legacy React codebase into typed, reusable components, significantly improving maintainability.
- Developed the GraphQL API serving both the customer app and the ERP.
- Implemented payment gateway integrations (Xendit, Midtrans).
- Implemented shipping API integrations (RPX, Shippit, Ninja Express) powering shipment creation and tracking.
- Enhanced data migration speed and experience by developing a Chrome extension that automates product imports from external marketplaces (Tokopedia, Shopee).

Tech Stack: TypeScript, React, Tailwind, Next.js, NestJS, PostgreSQL, GraphQL, Redis, Xendit, Midtrans.

Project: RPX ERP (Indonesian logistics and expedition company)

- Modernized a legacy SOAP API by wrapping it in a new REST API used by the company's ERP system.
- Built the ERP's React front-end and its API integrations.

Tech Stack: TypeScript, React, NestJS, PostgreSQL.

PERSONAL PROJECTS

Masbro Cloud | Open Source | October 2025 - Present

Open-source Platform-as-a-Service (PaaS) engine for organizations and self-hosting enthusiasts who want full control of their infrastructure with the ease of a managed platform.

- Organization, project, and application management.
- Application deployment: users upload their source code, and the system extracts it and runs a multi-step deployment (extract, build, push, start), producing a containerized application.
- Built with test-driven development, distributed tracing, and a distributed architecture designed for high availability.

Tech Stack: Nx Monorepo, Golang, Chi, PostgreSQL (Supabase), Supabase Auth, Docker, Caddy, RabbitMQ.

EDUCATION

Universitas Terbuka (Indonesia Open University) | Bachelor of Information Systems (Flexible/Concurrent Program) | 2024 - 2029 (expected)

The Odin Project | Full-Stack Web Development Curriculum | July 2020 - September 2021
